

Success Story: Educational Testing and Assessment Organization Migrating between Data Centers

Background

- Global Educational Testing and Assessment Organization supporting educational institutions and certification organizations.

Challenges/Needs

- The organization had a need to migrate 2 Data Centers to different locations in the same region.

Uila Solution

- The organization used Uila to conduct a pre-assessment of their current Data Center deployment.
- As part of the assessment, Uila discovered all of the virtual and physical assets in both Data Centers and the dependencies that existed between them.
- Also before migration, Uila alerted the IT team to performance-impacting issues in their Current Data Centers, so that the problems don't get transferred to the new deployment after migration. These issues included:
 - MS-SQL errors
 - DNS errors
 - High Network Response Time with a Network Gateway
 - A file server with disruptions. Uila pointed the root cause to be the datastore.

Uila Benefits

- With Uila, the IT team was able to pro-actively resolve issues before migration, and thus avoid a repeat of the problems in the new deployment.
- Fast and Efficient rollout of Uila's agentless solution for automated generation of the Application Dependency Map.
