		procs-info	OK	01/26/2017 02:49:56 PM	171923 22h 49m 56s	1/3	top - 14:49:59 up 199 days, 5:02, 0 users, load average: 0.05, 0.13, 0.16	

3. Allow VIC to monitor a different DC than the one where VIC is sitting

Enhancements:

1. Improve UMAS UI response time by 5~10 times
2. Use Script to automate Hyper-v permission setup
3. Hyper-v vST deployment failed due to VIC being installed on CSV storage
4. Abort Hyper-v UMAS deployment if users select a drive without plenty of free disk space
5. Smoothen physical vST installation
6. Japanese localization

Critical Bug fixed:

1. After create a VM group on Critical Resource and drill into it, don't see any VMs in the groups
2. Sometimes on the new dependent service map on Critical Resource, we don't see VMs we expect to see.
3. New dependent service map doesn't refresh as time range changes.
4. Failed to enable a vST which has been disabled.
5. A VM disappeared after power it down and power it back on.
6. See error message on VST configuration page and don't see the table for vST deployment.
