# Uila 1.19 Release Notes – November, 2016

New Features:

1. Processing monitoring for virtual and physical machines

2. Allow users to create multiple device groups on Critical Resource view
3. Identify more applications by updating application protocol list
4. Japanese localization
5. Korean localization
6. Tie on-premise UMAS license with language options
7. Support Hyper-v 2012

Enhancements

1. Add more diagnostic systems log for vST deployment failures
2. Users can finish UMAS and vIC deployment without valid DNS
3. Pop up warning message when UMAS is running low on disk spaces
4. Enhance UMAS stability
5. Allow users to specify VLAN ID when deploy UMAS and vIC for Hyper-V

Bug fixed:

1. # sign in the names of entities in a data center will cause backend query failures and empty dashboard
2. Lose CPU/Memory/Storage performance counters when vCenter reinitializes some objects
3. Fail to turn on external device monitoring or set packet capture destination due to wrong file permission of vim.properties
4. Fail to generate reports sometimes
