

Success Story: Hospital Group saves \$500K based on Rightsizing Guidance from Uila

Background

- Not-for-profit network of hospitals, clinics and health services based in USA, supporting more than a quarter of a million people.
- Hospital Group uses Epic EMR software for patient care, including registration and scheduling; clinical systems for doctors, nurses, emergency personnel, and other care providers; systems for lab technologists, pharmacists, and radiologists; and billing systems for insurers.

Challenges/Needs

- The IT team was tasked with the opportunity to validate the provisioning for their Epic EMR Database, before rolling out any new investments to support the software in an efficient manner for their current deployment.

Uila Solution

- Using Uila, the IT team was able to quickly get visibility into the memory over-provisioning scenario for their deployment.
- Uila provided them with the rightsizing guidance to enable reuse of their current infrastructure investment.

Uila Benefits

Uila helped them rightsize their deployment and save \$500k by avoiding the addition of another node to the EPIC system.
