

Network Security Analytics

Rapid Detection for Anomalies & Threats to ensure Business Transformation Success

Manage your Dynamic Business Transformation

Support Change Management to manage the unpredictable evolution of IT workloads, networks and technologies.

Eliminate Shadow IT

Bring back IT in control to lead Hybrid Cloud Adoption or other Business Transformation Projects that are aligned with your business goals.

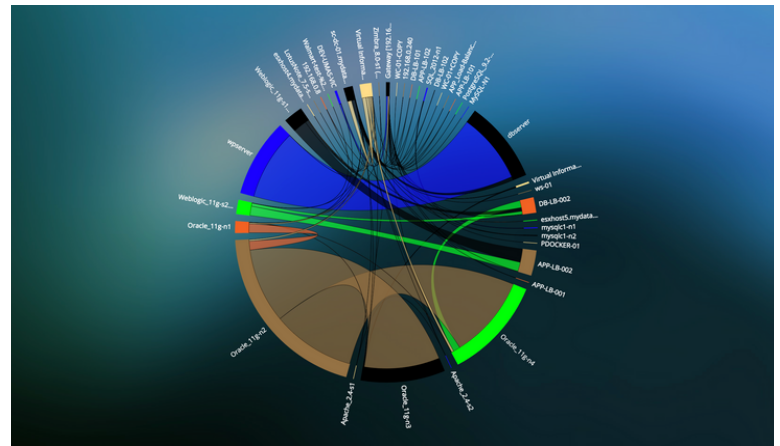

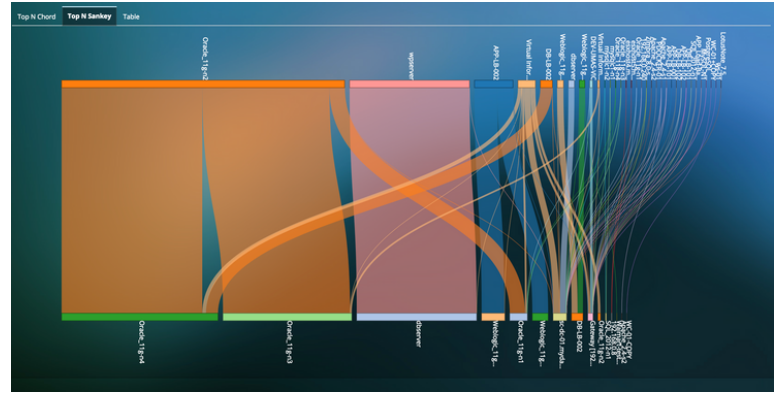

Rapid Detection of Network Anomalies & Threats

Real-time Full Network Security Insight with comprehensive Applications, Network and Infrastructure & East-West traffic statistics across VMs.

Rapid Detection of Network Anomalies & Threats

- Real-time Full Network Security Insight with comprehensive Applications, Network and Infrastructure & East-West traffic statistics across VMs.
- Detect East-West traffic which may indicate that a malware penetrated the outer security perimeter and has launched further attacks inside a vulnerable data center.
- Detect Abnormal patterns of connections and traffic flow indicating a network security threat that could impact business service performance and operations
- Packet Capture for Deep Packet Inspection & Forensic Evidence to solve network security challenges
- Ability to identify nearly all protocols and applications behind IP flows, on mobile and wireline networks, in any geography.

Total Visibility & Control of your Infrastructure

- Application auto-discovery for over 3000 applications with deep packet inspection to identify and avoid unauthorized application rollouts.
- Total visibility into your Infrastructure (Storage, Network, Users, Hosts, etc.) and know what “normal” looks like, to rapidly identify unwanted and unauthorized changes.
